

DESCRIPTION OF MY ACTIVITIES

I currently manage RedHat clusters with monitoring activities, installation of RedHat products and maintain infrastructure on-premise and cloud using AWS.

Previously I was a technical leader of development team for java and python, I had responsibility for tasks assigned to members of the team, evaluated new candidates and trained them

Currently I am more interested in positions like devops, SRE and work with cloud technologies. Also I'm learning about AWS technologies to do their certification.

JOBS

S.R.E. Senior

LaSegunda

December 2023 - Present

Extra job to administrate openshift clusters and infrastructure to policies company in my free times.

RedHat Senior Consultant

RedHat

August 2022 - Present

Administration of RedHat clusters with their products, provide a consulting service in backend development, openshift administration and good practices in different fields. I give support for Redhat products like openshift (kubernetes), SSO (keycloak), 3scale, ArgoCD and others.

S.R.E. RedHat partner

Na+ Labs

February 2021 - August 2022

Installation and maintenance of RedHat clusters together with all its products, commonly installed under on-premises hardware using vmware. My daily tasks are based on monitoring the status of the cluster, troubleshooting with applications and install RedHat products and configure them for different clients.

Back-end Technical Leader

Leafnoise

July 2018 - February 2021

Technical leader for microservice web applications for state entities. Preferably technologies like Python with Flask and Java with Springboot. Use of relational and non-relational databases. Three people in charge for several projects and several clients.

Full-stack Technical Leader

IT Resources - Daeva

February 2018 - July 2018

Technical leader in SGI web development of the client Swiss Medical in the Life insurance area.

Back-end Developer

Sysone

August 2017 - February 2018

Canned application development for insurance businesses, mainly using Java and MySQL technologies.

Full-stack Developer

IT Resources - Daeva

February 2017 - August 2017

Development of functionalities for the SGI web application of the client Swiss Medical including front-end, back-end and relational database using mainly RedHat technologies.

MY PROJECTS

Projects I work on in my free time, are generally template creation or new tools to improve the performance and quality of software products.

Devops - Tools for devops jobs to practices and investigate

Hefesto - Tool to create projects structures by yamls files

Jaime - Tool like jenkins and Ansible. This tool can execute python scripts in containers with specific programs, for example kubernetes, terraform, aws-cli and more

Dockers útiles - Project with differents containers ready to use with docker compose

My CV - Deployed using gitpages with a free DNS

KNOWN TECHNOLOGIES

AWS

EC2, S3, IAM, ELB, RDS, ECS, Lambda, Cognito, ElastiCache, DocumentDB, Glue, DMS, ECR, CloudWatch, Route 53, VPC

Containers

Kubernetes, Openshift, Docker, Podman

DevOps

Jenkins, Keycloak, Graphana, Prometheus, ELK, Istio, Kong, 3scale, Consul, Portainer, Quay, Harbor

QA

SonnarQube, Clair, Trivy, JMeter, Ddosify, Backstage

Servers, Proxies, Reverse-proxies

F5, Nginx, Apache HTTP

CI/CD

Git, ArgoCD, Tekton, Jenkins, CircleCI, Github Actions, GitlabCI

Infrastructure

Terragrunt, Terraform, Ansible

Virtualization

Proxmox, VMWare, Openstack

Back-end development

Python 3.11, Java 17, Typescript, Javascript, Ruby, C#

Relational Databases

SQL Server, MySql, MariaDB, PostgreSQL, DB2, Oracle

NO-Relational Databases

MongoDB, Cassandra, Neo4J, Redis, DynamoDB

Front-end development

Angular, css, scss, ES6, HTML

Mobile

Kotlin

Administration

Miro, Trello, Jira, Taiga, Redmine, Easy-Redmine

Agile

Scrum, Kanban
