

## DESCRIPTION OF MY JOBS

Development, deployment and configuration of environments for web applications in various languages. CI / CD configuration for their deployment.

Administration of tasks and assignments for the team. Election of personnel based on a required tender including evaluation of new candidates if necessary.

Currently I am more interested in the wall of devops so I research on end technologies like Kubernetes, Terraform and AWS.

## JOB

**Project Leader**  
Leafnoise

July 2018 -

Project leader in charge of participating in meetings with the CEO of the company and with the clients for a possible project, development of DEMO to present and team formation in the event that the tender is completed.

**Full-stack Technical Leader**  
IT Resources - Daeva

February 2018 - July

Technical leader in SGI web development of the client Swiss Medical in the Life insurance area.

**Back-end Developer**  
Sysone

August 2017 - February

Canned application development for insurance businesses, mainly using Java and MySQL technologies.

**Full-stack Developer**  
IT Resources - Daeva

February 2017 - August

Development of functionalities for the SGI web application of the client Swiss Medical including front-end, back-end and relational database using mainly RedHat technologies.

## MY PROJECTS

Projects I work on in my free time, are generally template creation or new tools to improve the performance and quality of software products.

Scripts Mágicos - Linux scripts to run preferably with automation services

Template GitActions y python- Python project structure with flask for automated deployment on Heroku with Gitactions

Template de python con docker - Python project structure with flask deployed automatically on Heroku using CircleCI and Docker Hub to store deployed versions

Dockers útiles - Project with dockers of all kinds, from automation tools like GoCD, Jenkins, through databases like Redis, MongoDB, Cassandra, S3 file systems like Minio, etc.

Este CV - Deployed using gitpages with a free DNS

## TECHNOLOGIES

### Back-end

Python, Java, JavaScript, Groovy, Scala, Xtend, Ruby, C, C++, C#

### DB

MongoDB, Cassandra, Neo4J, Redis, SQL Server, MySQL, MariaDB, PostgreSQL, DB2, SQLite

### Front-end

MongoDB, Cassandra, Neo4J, Redis, SQL Server, MySQL, MariaDB, PostgreSQL, DB2, SQLite

### Mobile

Kotlin, React Native, Native Script

### DevOps

Docker, Docker Compose, Docker Swarm, Kubernetes, LXC, LCD, Jenkins, GoCD, CircleCI, GitActions, Terraform, AWS

### Deployments

Nginx, Envoy, Ha-proxy, Apache-http, Jboss EAP, Jboss Fuse, Tomcat

### Administration

Trello, Jira, Taiga, Redmine, Easy-Redmine
